STAGE-1

Converting PDF → TextFile → CSV.

1. stage1. - Convert whole pdf to text file
2. stage2- Remove static words from the text file [header section]
3. Stage 3 - Removes ~~footer~~ dynamic words ~~of~~ [ie. Published on xx/xx/xxxx Page x of xx.. and Page x END --] of footer section.
4. Stage 4 - Removes remaining block of repeating words/section.
5. Stage 5 - Removes remaining spaces between records to produce smooth preprocessed csv file.
6. stage 6 - Insert colums of the table at the starting of file.
7. ~~Csv~~ Stage 7 - Convert text to csv file
8. preview - shows top 100 lines of stagex.text ~~to process~~

* In stage 7 the specified columns = [PWD/Def, EWS, TFWS, orphan] has empty records causing ~~corr~~ data corruption in csv file.

To reduce corruption ~~in~~, I used this logic
Consider,
Left side Colums = [Merit No, App ID, Name, merit Exam, Category, Gender]

Right side Cols = [Percentile/Mark, MHT CET Maths Percentile, ..., SSC English %.].

- This logic helps to prevent Empty records of the specified columns, helping to ~~pro produce~~ produce error-less .CSV.

STAGE-2 [files 2024.CSV, 2025.CSV, 2026(SV]

New - folder

↓

located all programming files.

- Objective - Create a dataset contuing droppers percentile/Mark, ~~MHTCET~~ MHTCET Physics Percentile,..., MHTCET Chemistry Percentile....

- After ~~observa~~ observation categorized / classified columns.
In P.O.V of using 3 csv....
100% static colums = [SSC Total %,
SSC Math %,
SSC Sci %.,
SSC English %.,
Category,
gender
]

- Almost No one does not repeat / give 10th boards again.
- Category - Does not change fact that everyone avails ~~fors~~ reservation benefit.
- Gender - Does not change..

- Probable static column = [
  HSC PCM %,
  HSC Math %,
  HSC Physics %,
  HSC / Diploma I.D. voc Total %
  ]

- ~~Duplicate~~ Some droppers may entirely focus on MHTCET, Jee, etc exams.
- But some candidates may give board exam again for 75 %> etc criteria or other reason.

- Guaranteed dynamic column [100 % risk of changing datavalues] = [
  merit, No.,
  Application ID,
  *MHT-CET-PCM Percentile
  - 1) Math
  - 2) Physics
  - 3) Chemistry ,

- dynamic column = Candidate Full Name
  - Sequence in other csv would be different.
  - can be converted into static by breaking Full Name into 3 parts.
    - Surname, student-name, Parent-name.

- Creating a CSV file, which will help to identify the records of 3 years at single time.

- Stage 1 - Creating a csv file containing,

  Exam, year, Full Name, category, gender,

- Stage 2 - Modifying and Creating new csv file by breaking Candiate Name into [Surname, candiate name, Parent name] and placing between candiate name and category.

Overview -

name-col	Surname	candidate name	Parent name	category

- Stage 3 - combining csv files with static columns. [using 3 files]

  Combining SSC Total %, ..., SSC English %. after gender col.

- Stage 4 - combining csv files with probable dynamic columns; [using 3 files]

  Combining HSC PCM %, ..., HSC | Diploma | VOC. Total %

- At stage 4 we got a combination of 3 year csv file.

Date:

YOUVA

Stage 5 - Using Combinined CSV file

creating New CSV file containing

Name, Category, gender, SSC Total %, ..., SSC English %, HSC PCM %, ..., HSC / Diploma / D.VOC. Total %, 2024 - percentile / Mark, ..., 2026 - MHT CET Chemistry percentile ..

Logic of stage 5 in diagramatical representation.

1. Combined 3 csv file → as whole primary key

Exam Year	Candidate name	SSC Total	...	SSC English	HSC PCM %	...	Chemistry Percentile
↓	↓						
file-name	pri.key						

Exam Year - locate 202x / 2024. file

. Then searches and compare with each record containing in 3 year Combined file with that respective year.

. If records matches then copies [Percentile / Mark to MHT CET all subject Percentiles record from 202x / 2022 or respective year file] to [new CSV file.]

. Same repeats for 2025 and 2026 files.

YOUVA PELLAB

Stage 6 - ~~Normalization~~

Removing single exam given candidates

Logic -

Classfying -

2024_ Percentile/Mark
2024 MHTCET Math Percentile
2024 MHTCET Physics Percentile
2024 MHTCET Chemistry Percentile
→ as 3 one.

.. same for 2025, 2026.

Consider 2024 → P, 2025 → q, 2026 → r.

extracting • $P \wedge q \wedge r$, $q \wedge r$, $P \wedge r$, .

Stage 7 - Reverse - cross verification of csv.

Cross checking records if they are accurate or not.

Logic :- Reversed the logic of stage 5.

~~Considering~~ : .

* Removed the columns which contain direct identification of candidates.
